

Campus Second-hand Textbook Platform

Background: textbooks are replaced every term, and most copies sit idle.

Goal: a trading platform serving 5000 students of this university.

Tech stack: FastAPI backend, Vue3 frontend, MySQL and Redis for storage.

A multimodal LLM reads the cover photo and fills in the book information.

Another LLM call does semantic matching between buyers and sellers.

Schedule: 10 weeks, finished by 3 undergraduate students.

Outcome: a running platform plus a graduation thesis.
